About Me

I am a dedicated software developer with experience in automation, AI, and cybersecurity. I have a strong passion for developing maintainable software systems, educational tools, and automation programs that support data processing and system management. I am eager to continue learning and applying emerging technologies such as machine learning and embedded Linux to real-world challenges.

Skills

- Linux System Administration
- Automation tools with python
- Computer vision
- React , React Native
- AWS, Docker, kubernetes
- Moodle box Deployment
- Raspberry pi

Education

Bachelor of Arts (Philosophy)

Meikhtila University 2017 - 2020

Computer Science and latest technologies

Online short courses 2021 - present

Experience

Linux System Administration 2022 - present
(Raspberry pi os)

Deploying LAMP Stack web application on local machine.
Users, process, file permissions and software package management.

Python Programming 2022-Present
(Automation, Computer Vision and data science)

- ·Developed web automation tools using Selenium framework.
- ·Built scripts for automatic data download and analysis using Pandas and Matplotlib.
- ·Created face detection and image processing models with OpenCV

React Native 2025-current

- ·Developed Movie Explorer app using React Native and TMDB API.
- ·Implemented navigation and data fetching with Axios.
- ·Optimized UI performance with FlatList and React Native best practices.

Embedded Linux 2024 - present
(Yocto Project)

- ·Customized Linux OS for Raspberry Pi 4 (BCM2711 Broadcom).
- ·Configured system components for embedded applications.

Teaching Experience as an Instructor

2021 - present

- Computer Basic
- ICT Foundation
- Defensive Digital Security
- Google suite
- Moodle box
- Raspberry Pi - 4
- Python programming
