https://salaijichanwook.github.io/myportfolio/

github.com/SalaiJiChanWook (Open to Global Remote / Freelance)

Versatile and impact-driven Python & IoT Software Developer with 3+ years of experience engineering real-world software solutions, autonomous web automation, and offline-first edge deployments. Proven track record deploying humanitarian offline LMS architectures for conflict-affected communities with zero internet access, alongside building practical micro-controllers (ESP32/Raspberry Pi) and modern AI-augmented full-stack web tools. Experienced in deploying cloud infrastructure (AWS/Terraform) and delivering extensive in-person technical training.

CORE COMPETENCIES

Backend & Automation

Python 3 Automation Scripts

Telegram Bot API Selenium Pandas OpenCV REST APIs

IoT, Hardware & Edge

Raspberry Pi (4 & 5) ESP32 Dev Board ESP32-CAM Embedded Linux

Yocto Project Hardware Sensors / GPIO

Linux & DevOps

Ubuntu Debian Raspberry Pi OS CentOS Kali Linux LAMP Stack Docker

Cloud & Third-Party APIs

AWS (EC2, S3, ALB, Route 53) Terraform Google OAuth 2.0 Sheets / Drive API Automated Mailing (SMTP)

AI-Augmented Development

Cursor AI Google AI Studio

Gemini / Claude / GPT

React Frontend + Python API

EDUCATION & FOUNDATION

Bachelor of Arts (Philosophy)
Meiktila University • 2017 – 2020

Strong analytical and deductive logic foundations. Transitioned into applied computer science, self directed systems development, and hands-on laboratory deployments.

KEY ENGINEERING & DEPLOYMENT PROJECTS

Offline LMS Infrastructure & Data Automation 2022 – Present

Humanitarian Edge Deployment • Raspberry Pi & Python Automation

Architected and deployed standalone offline MoodleBox / LAMP LMS platforms on Raspberry Pi (4 & 5) for IDP (displaced) children impacted by severe internet cutoffs.

Engineered custom Python automation workflows to extract, aggregate, and synchronize student progress data from offline local nodes without continuous connectivity.

Ensured continuous hardware stability, user management, and high availability power management across remote environments.

Python Developer & Automation Integrator 2022 – Present

Freelance & Contract Work • Remote

Developed functional Telegram Automation Bots with custom commands, event triggers, and secure API integration for real-time notification dispatch. Engineered end-to-end data pipelines leveraging Google Sheets API, Google Drive API, and OAuth 2.0 with scheduled transactional email notifications. Built computer vision detection scripts using OpenCV and web scrapers with Selenium, transforming tabular datasets using Pandas.

IoT Systems & Embedded Hardware Prototyping 2023 – Present

Hardware Integration & Custom Microcontrollers

Built connected sensor prototypes integrating ESP32 Dev Boards and ESP32- CAM modules for edge data capturing and local network streaming. Configured and compiled custom embedded Linux images on Raspberry Pi using the Yocto Project framework (BCM2711 Broadcom target).

TECHNICAL INSTRUCTOR EXPERIENCE

Lead Technology Instructor 2021 – Present

In-Person Technical Workshops & Community Training

Delivered extensive hands-on instruction covering Python Programming, Raspberry Pi hardware, Digital Security Defense, and ICT Foundations to hundreds of students.

Mentored beginners on Linux command-line essentials, package maintenance, and troubleshooting edge hardware.
